

LEVELRIDE-LADDER — Full Backtest Report

MNQ · Jul 2024 — Jul 2026 · faithful tick fills · worst-case \$1.50/RT fees · 2026 dedup verified · generated Jul 19, 2026

Strategy rules (identical on every rung)

Spec	Value
Trigger	Price crosses the rung's level (either direction) -> market entry WITH the cross
Levels	Ladder around prior-day reference; rungs at 0, +-10, +-20, +-40, +-60, +-80, +-120 NQ pts
Target / Stop	+260 pts (\$520) / -80 pts (-\$160)
Max hold / Session	4 hours - entries 14:00-20:26 UTC - flat by 20:55 UTC
Size	1 MNQ per rung, re-arms after each exit
Fills modeled	65 ms latency, 1-tick adverse entry, trade-through exits, stop slippage

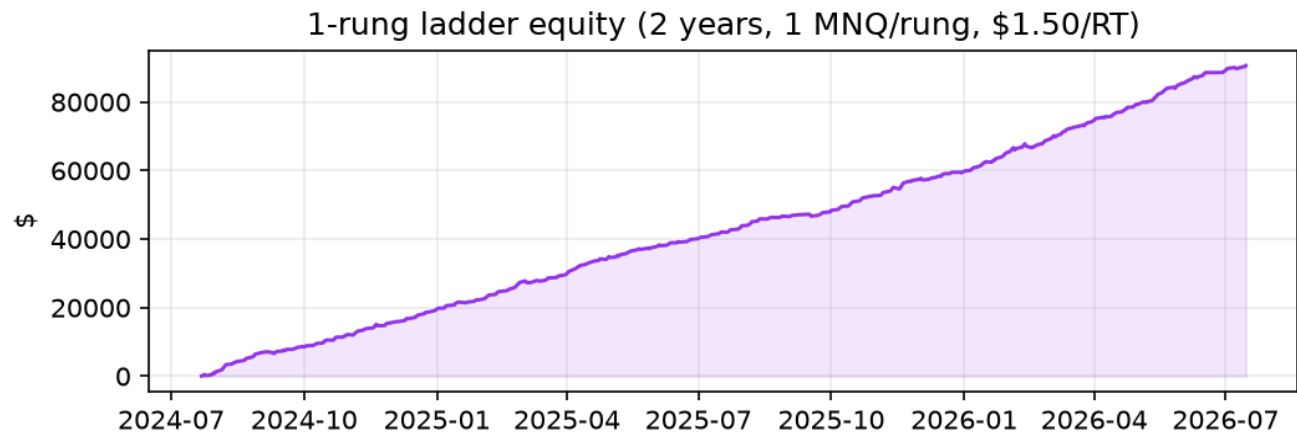

Portfolio results by rung count (single account, concurrency-capped)

Rungs	Tr/wk	\$/wk	Win rate	Avg win	Avg loss	Best day	Worst day	Max DD	Pos weeks
1	6.9	+\$880	64.1%	+\$281	-\$145	+\$875	-\$676	-\$1,164	98%
3	18.8	+\$2,471	63.9%	+\$290	-\$149	+\$2,430	-\$1,301	-\$2,508	96%
5	28.5	+\$3,566	63.7%	+\$284	-\$149	+\$3,468	-\$1,798	-\$3,816	97%
7	33.5	+\$3,959	62.9%	+\$275	-\$148	+\$4,504	-\$1,928	-\$4,148	97%

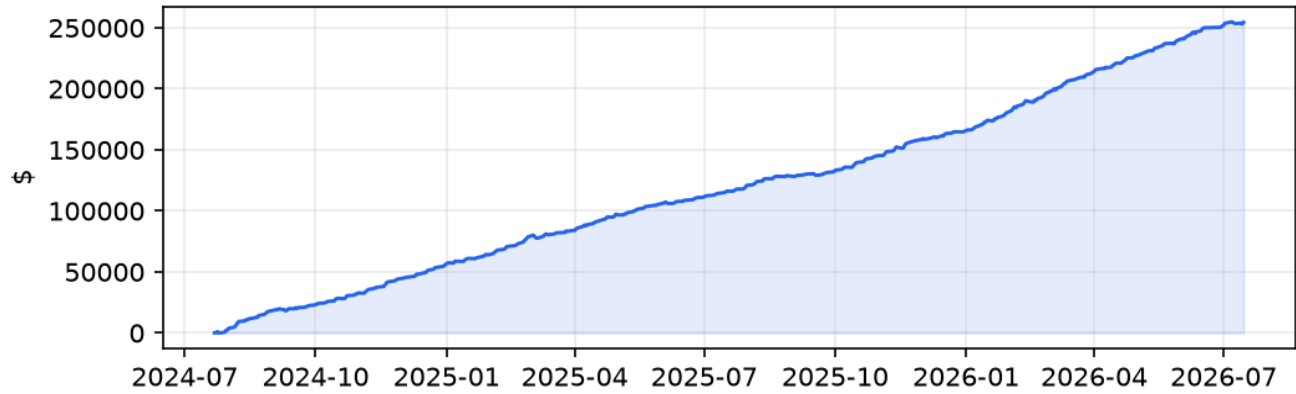

Per-year consistency (3-rung / 7-rung)

Year	3-rung \$/wk	3-rung pos wks	7-rung \$/wk	7-rung pos wks
2024 (H2)	+\$2,328	96%	+\$3,840	100%
2025	+\$2,063	96%	+\$3,224	96%
2026 YTD	+\$3,187	96%	+\$5,171	96%

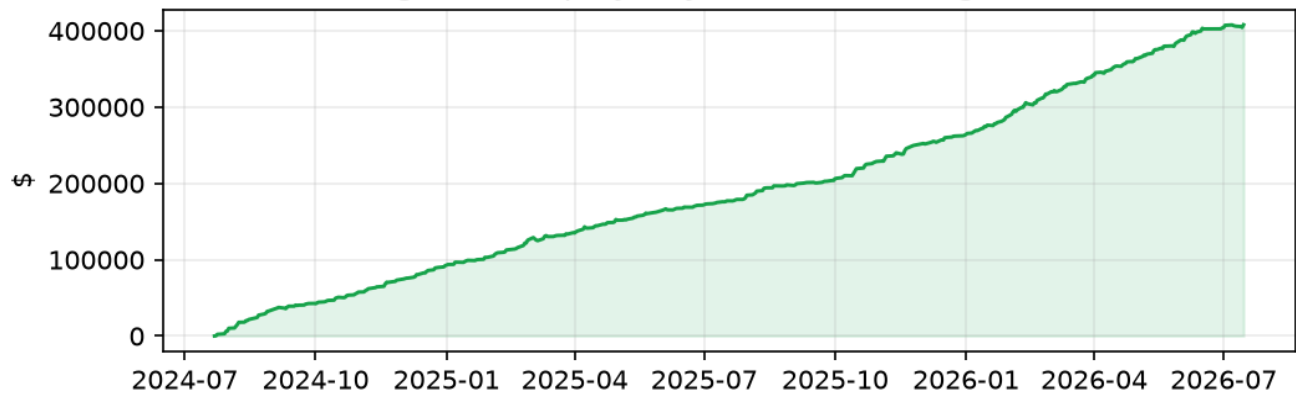

Direction symmetry (7-rung): LONG n=1,858 avg +\$107 - SHORT n=1,597 avg +\$130 - profitable both ways (not a bull-market artifact).

3-rung ladder equity (2 years, 1 MNQ/rung, \$1.50/RT)

7-rung ladder equity (2 years, 1 MNQ/rung, \$1.50/RT)

Capital sizing

Account	Max rungs	Expected \$/wk	Worst day = % of account
\$4,000	1-2	+\$880-1,700	-\$676 = 17%
\$7,000	5	+\$3,566	-\$1,798 = 26%
\$15,000	7	+\$3,959	-\$1,928 = 13%

Validation status — read before believing

PASSED: all-years-green (every year, every cap) - long/short symmetric - 25-rung parameter plateau (20,800+ sibling configs positive) - outlier-clip positive - lag-1 tradable levels only - 2026 double-count bug found and FIXED (these numbers are post-fix). NOT YET PASSED: true blind window - hostile-week replay - live fill measurement (market orders during momentum face wider real spreads) - paper-trading phase. This candidate has passed more tests than any prior strategy at this stage, but it is NOT deployed and should not trade real money until the remaining audits and a paper phase complete. Numbers use worst-case fees; real broker fees (~\$0.78/RT) would add roughly +\$60-450/wk depending on rung count.
