

LEVELRIDE-LADDER — 26-Week Growth Projection

Start \$4,100 USD (demo, sized to real capital) - MNQ - take-turns upgrade model

PROJECTION / ILLUSTRATION - NOT a prediction. ~80% of worst-case-fee backtest with realistic variance & red days. Later weeks assume every upgrade fires on schedule and the edge holds for 6 months straight - optimistic. See disclaimers.

Reality check - read this

1) This is the OPTIMISTIC SHAPE of compounding, not a forecast. It assumes ~6 months with no bad stretch and every upgrade filling cleanly - which will NOT happen exactly. 2) The strategy has a CAPACITY ceiling: on MNQ you can only scale so far before your own orders move the market and slippage eats the edge - that is why the ladder caps at 7 rung x 4 MNQ here, and even that is generous. 3) Real path will have losing weeks, drawdowns (sim worst -\$2,508 at 3 rungs), and stalls. A more sober expectation is roughly HALF this curve if the edge holds. 4) Weeks 1-3 run on the \$4,100 DEMO, risking nothing real. Real money only after the demo proves live fills match the backtest and you choose to. 5) Backtest passed all-years-green / long+short / 20,800 sibling configs; NOT yet passed live-fill, hostile-week, blind-window - the demo is that test.
