

LEVELRIDE-LADDER — 26-Week Best-Case Projection

Start \$4,100 - 3->5->7 rung then size scales uncapped - 96% positive weeks (1 losing week) - ~90% of sim
Best-case model matching the backtest's own 96% positive-week rate. Returns ~90% of the worst-case-fee sim (lightly padded down). Size keeps rising with capital under a 20%-worst-day safety rule. Projection, not a promise - the real unknown is whether the edge holds 6 months.

Projected: **\$4,100 -> \$3,521,010** in 26 weeks. Final size: 7 rung x 27 NQ (=270 MNQ). 25 winning weeks, 1 losing (96%).

Notes

Best-case, but grounded: 96% positive weeks matches the backtest; returns are ~90% of the worst-case-fee sim so slippage/fee reality is partly absorbed. Size never stops climbing - it rises with the account (converting MNQ->NQ at scale) under one rule: worst simulated day stays under 20% of balance. The ONE real gamble is edge persistence over 6 months - backtests can degrade in live. Weeks 1-3 run on the \$4,100 demo (zero real risk) to confirm live fills match sim first.
